Introduction

As businesses continue to grow in the digital environment, having a well-designed and properly managed website has become essential. A website allows a company to promote its products and services, communicate with customers, and build a strong online presence. For **Baked & Ready Ltd**, developing a professional website will help the company showcase its baked goods, attract new customers, and provide important information about its offerings.

This report provides guidance to stakeholders of **Baked & Ready Ltd** on the key components required to successfully develop the company's website. It first examines **web hosting options**, explaining what web hosting is and comparing different hosting providers to determine the most suitable solution for the business. The report then explores **Content Management System (CMS) options**, outlining their benefits and drawbacks while comparing several platforms to identify the best option for managing the website's content.

Additionally, the report presents a **Website Style Guide** that establishes consistent design standards, including typography, colours, images, and layout elements. Finally, a **Home Page prototype created using HTML and CSS** is provided as a proof of concept to demonstrate how the website for **Baked & Ready Ltd** may appear and function.

Web Hosting Options for the Company

Explanation of Web Hosting

Web hosting is a service that allows a website to be stored on a server and made accessible on the internet. When a person types a website address into their browser, the hosting server delivers the website's files, images, and content so that the page can be displayed.

Websites need web hosting because the files that make up the website must be stored somewhere that is connected to the internet at all times. A hosting provider supplies the server space, technology, and security needed to keep the website online and accessible to visitors. For Baked & Ready Ltd, web hosting will ensure that customers can view the company's products, services, and contact information online at any time.

Hosting Types Overview

Shared Hosting

Shared hosting is when multiple websites share the same server and its resources. It is usually the most affordable option and is suitable for small businesses or websites with lower traffic. However, performance may be affected if other websites on the server use too many resources.

VPS Hosting (Virtual Private Server)

VPS hosting divides a server into several virtual servers. Each website receives dedicated resources, which improves performance and reliability compared to shared hosting. It is suitable for growing businesses that require more control and better performance.

Dedicated Hosting

Dedicated hosting means that an entire server is used by only one website. This provides maximum performance, control, and security. However, it is more expensive and usually used by large companies with high traffic websites.

Cloud Hosting

Cloud hosting uses a network of multiple servers instead of a single physical server. This allows websites to scale resources easily when traffic increases. Services such as Amazon Web Services (AWS) and Google Cloud Platform provide flexible and highly reliable cloud hosting solutions.

Managed Hosting

Managed hosting means the hosting provider takes care of technical tasks such as updates, security monitoring, and maintenance. This option is useful for companies that want to focus on their business rather than managing servers.

Static Site Hosting

Static site hosting is designed for websites built with static files like HTML, CSS, and JavaScript. Platforms such as Netlify, GitHub Pages, and Vercel host these websites and often provide fast performance and automatic deployment features.

Comparison of Hosting Providers

Feature	Bluehost	Amazon Web Services (AWS)	Netlify
Reliability & Uptime	High uptime and reliable service	Extremely reliable with global infrastructure	High uptime with global content delivery
Security	Basic security features and SSL certificates	Advanced security tools and configurations	Built-in HTTPS and secure deployment
Scalability	Limited scalability compared to cloud providers	Highly scalable with flexible resources	Scales well for static websites
Backup Options	Automatic backups available	Multiple backup and recovery options	Continuous deployment and version control
Customer Support	24/7 customer support available	Support available but may require paid plans	Documentation and community support
Cost / Value	Affordable plans for small businesses	Pay-as-you-use pricing, can become expensive	Free tier available with affordable paid plans
Ease of Use	Very beginner friendly	Requires technical knowledge	Easy to use for developers
Performance / Speed	Good performance for small websites	Very high performance globally	Fast performance using CDN
Suitability for Business	Good for small to medium business websites	Suitable for large and complex applications	Best for static or developer-based sites

Recommendation

Based on the comparison, **Bluehost is the most suitable hosting option for Baked & Ready Ltd.** Bluehost is beginner-friendly, affordable, and provides reliable uptime, which makes it ideal for small to medium-sized business websites. It also offers useful features such as automatic backups, security tools, and customer support that can help maintain the website easily.

Additionally, Bluehost integrates well with popular CMS platforms such as WordPress, allowing the company to manage and update website content without requiring advanced technical knowledge. This combination of ease of use, cost-effectiveness, and reliability makes Bluehost the best hosting option for the company's website

Content Management Systems (CMS) Options

Explanation of a CMS

A **Content Management System (CMS)** is a software platform that allows users to create, edit, organize, and manage digital content on a website without needing advanced programming knowledge. It provides an interface where administrators can add pages, upload images, publish articles, and update information easily.

The main role of a CMS is to simplify website management. Instead of writing code every time changes are needed, users can log into the system and update content through a dashboard. This helps businesses keep their websites updated, maintain consistency, and manage content more efficiently.

Benefits and Drawbacks of Using a CMS

Benefits

1. Easy Content Management

A CMS allows users to update website content easily without needing strong technical skills. Employees can add text, images, and pages through a simple interface.

2. Faster Website Development

Many CMS platforms provide templates and themes. This allows businesses to build and launch websites more quickly compared to coding a website from scratch.

3. Plugins and Extensions

Most CMS platforms support plugins or extensions that add extra features such as SEO tools, security features, contact forms, and e-commerce capabilities.

Drawbacks

1. Security Risks

Because CMS platforms are widely used, they can be targets for hackers if the system, themes, or plugins are not updated regularly.

2. Performance Issues

Websites that use many plugins or poorly optimized themes may load slower compared to custom-built websites.

3. Maintenance Requirements

CMS platforms require regular updates for the core system, plugins, and themes to maintain security and performance.

Comparison of CMS Platforms

Feature	WordPress	Joomla	Shopify
Ease of Use	Very user-friendly and suitable for beginners	Moderate difficulty, requires some technical knowledge	Very easy to use with a simple interface
Cost	Free core software, but hosting and premium plugins may cost	Free core software but hosting required	Monthly subscription plans required
Customization & Scalability	Highly customizable with thousands of themes and plugins	Flexible but fewer extensions compared to WordPress	Customization mainly focused on online stores
Plugins / Extensions	Over 50,000 plugins available	Large extension library but smaller than WordPress	App store available but fewer options
Security Features	Security plugins available; updates required regularly	Strong built-in security options	High security because hosting and platform are managed
E-commerce Suitability	Excellent with plugins like WooCommerce	Possible with extensions but more complex	Designed specifically for e-commerce stores
Maintenance Requirements	Requires regular updates and plugin management	Requires updates and some technical management	Maintenance handled by Shopify
Mobile Responsiveness	Most modern themes are mobile responsive	Mobile responsive templates available	All themes are optimized for mobile devices

Recommendation

The most suitable CMS for the company is **WordPress**.

WordPress is recommended because it offers the best balance of **ease of use, customization, and flexibility**. It has a very large community, thousands of plugins, and many themes that allow businesses to create professional websites. It also supports **e-commerce functionality through plugins like WooCommerce**, making it suitable if the company decides to sell products online in the future.

Although WordPress requires regular maintenance and updates, its flexibility, scalability, and cost-effectiveness make it the best option for most businesses. It allows the company to grow its website and add new features over time without needing to rebuild the entire system.

Website Style Guide for Baked & Ready Ltd

Logo Usage Rules

Typography

Typography ensures text on the website is clear, readable, and consistent.

Font Families

Primary Font:

- **Poppins** – Used for headings and important text

Secondary Font:

- **Open Sans** – Used for paragraphs and body text

Font Hierarchy

Element	Font	Size
H1 – Main Heading	italic	36px
H2 – Section Heading	italic	28px
H3 – Sub Heading	italic	22px
Body Text	italic	16px
Small Text	italic	14px

This hierarchy helps users easily scan and understand the website content.

Colour Palette

The colour palette reflects the warm and welcoming theme of a bakery.

Primary Colours

Colour	HEX	RGB
Bakery Brown	#6B3E26	RGB(107, 62, 38)
Cream Beige	#F5E6D3	RGB(245, 230, 211)

Secondary Colours

Colour	HEX	RGB
Soft Orange	#E89A3D	RGB(232, 154, 61)
Dark Brown	#3E2723	RGB(62, 39, 35)

Usage

- Primary colours should be used for headers, backgrounds, and branding.
- Secondary colours should be used for highlights, buttons, and accents.

Graphic Elements

Graphic elements help maintain a consistent layout across the website.

Spacing

- Standard spacing between sections: **5px**
- Spacing between text elements: **10px**

Layout Rules

- Use a **grid layout** for structure.
- Content should be aligned consistently.
- Maintain equal margins on both sides of the page.

Dimensions

- Maximum content width: **1200px**
- Images and graphics should scale properly on different screen sizes.

Images

Images help showcase the products and atmosphere of the bakery.

Recommended Image Dimensions

Type	Size
Hero Banner	1920 × 800 px
Product Images	800 × 800 px
Gallery Images	1000 × 700 px

Usage Rules

- Use **high-quality images** of baked goods and products.
- Avoid blurry or pixelated images.
- Images should match the warm bakery theme.

Alt-Text Guidelines

Each image must include descriptive alt text for accessibility.

Example:

- “Freshly baked chocolate cake from Baked & Ready Ltd.”

Buttons & Call-to-Action Elements

Buttons guide users to important actions on the website.

Button Style

- **Shape:** Rounded corners (8px radius)
- **Primary Colour:** Soft Orange (#E89A3D)
- **Text Colour:** White (#FFFFFF)

Hover Effect

When users hover over a button:

- Colour changes to **Dark Brown (#3E2723)**
- Slight shadow effect appears

Placement

Buttons should appear in key areas such as:

- Hero section
- Product pages

Validation

CSS

W3C CSS Validator results for BakedReady.css (CSS level 3 + SVG)

Congratulations! No Error Found.

This document validates as [CSS level 3 + SVG](#) !

To show your readers that you've taken the care to create an interoperable Web page, you may display this icon on any page that validates. Here is the XHTML you could use to add this icon to your Web page:
